

NourishNet

“Digitising Tiffin Economy”

Personalized Food
Delivery Service

Problem Statement

To develop a comprehensive Software-as-a-Service (SaaS) platform designed to digitize and optimize the operations of local tiffin services.

Current Situation

- Vendors still run operations manually .
- Inefficient logistics (eg food wastage).
- No centralized platform.
- Thin margins
- Frequent delays

Solutions

- End-to-end SaaS for vendors to digitize operations
- Mobile app for customers to subscribe, customize, and track meals
- Real-time analytics to optimize delivery & reduce food waste.
- Offering various subscriptions.

Product Features

B2B

- Order & subscription management
- Delivery route optimization
- Customer feedback & analytics

B2C

- Meal subscription plans
- Pause, resume, or skip meals easily
- Live delivery tracking
- Notifications via Firebase Cloud Messaging.

Business Model

- Subscription: (weekly / monthly).
- Transaction Fee: commission on each customer order
- Future scope: Partnerships with cloud kitchens, health startups , NGOs
- Real-time Delivery tracking.
- Secure authentication for both customers and vendors.

Competitors

1. Swiggy / Zomato: only restaurants.
2. Homemade meal apps: for small scale
3. WhatsApp / SMS: for manual solutions

NourishNet - First holistic SaaS for tiffin ecosystem

Frontend

- Customer App: React Native / Flutter
- Admin Dashboard: React.js / Angular.js / Vue.js (Web)
 - Styling: CSS / SCSS / Tailwind CSS

Backend

- Node.js / Express.js (API)
 - Database: MongoDB / PostgreSQL
 - Authentication: JWT / OAuth2
- 

AI & Analytics:

- Route Optimization: Traveling Salesman Problem / Graph-based algorithms
- Sales & Waste Analytics: Predictive analytics with Python / AI libraries

Notifications

- Firebase Cloud Messaging (Push notifications)
